

## Data to Insight: Investing in data for good

**Joseph Cornford-Hutchings**  
Data Analytics  
Level 4

Data to Insight is a national project designed by local authorities to make better use of their data with a primary focus on children's social care. They are investing in upskilling data capabilities across local authorities to enable the crucial work their services provide to effectively support children.

### Who is Joseph

Joseph is an Information Analyst for East Sussex Children's services, he is currently completing the Data Analytics Level 4 programme with Corndel. Joseph performs crucial work on a daily basis to better support children in social care.

### Personal highlights

*"Coding was always a gap in my knowledge and I feel the programme has already opened up so many possibilities for improving processes which gives me more time for in-depth analysis work. Learning SQL is a great example of this and has massively improved my understanding of the reports we create which means I'm more confident working on them."*

*Working towards a qualification which will sit alongside my years of experience will definitely help open future career opportunities for me too."*

### Advice to other learners

Joseph is keen to encourage others to join the programme to develop themselves as an individual, become more confident in their own role and open new avenues of opportunity for themselves.

"Do the programme! I didn't have any difficulties finding time in my day for the programme which really came as a result of the buy-in from my managers. Overall it has made me much more confident in my role"

*"My confidence has grown so much already. The course was so tailored to my day job, it has massively surpassed my expectations!"*
